Ayush Rauniyar DevOps Engineer

Imadol, Mahalaxmi-04, Lalitpur • devops@gmail.com • +977 3333-5555

PROFILE SUMMARY

- **DevOps Engineer** with **6 years of experience** supporting **high-traffic e-commerce systems**, **logistics automation platforms**, and internal developer infrastructure, specializing in **cloud-native reliability, pipeline automation, and scalable service delivery**.
- Solid technical background across **infrastructure-as-code** (**Terraform**, **Pulumi**), **container platforms** (**Kubernetes**, **ECS**), **CI/CD operations** (**GitHub Actions**, **GitLab CI**, **Jenkins**), **observability stacks** (**Prometheus**, **Grafana**, **ELK**), and **cloud ecosystems** (**AWS**, **Azure**) with strong scripting fundamentals in **Python** and **Bash**.
- Well-versed in **container lifecycle automation**, **performance tuning**, **service deployment patterns**, network configuration, secrets management, and environment consistency, using **repeatable IaC workflows**, **GitOps models**, and automated release strategies such as **canary and blue-green rollouts**.
- Collaborative partner working closely with **Backend, Data, and Security teams** in **Agile environments** to plan deployments, resolve integration issues, conduct incident reviews, and support architectural decisions for distributed systems.

TECHNICAL SKILLS

Cloud Platforms:	AWS (EKS, ECS, Lambda, RDS, SQS, CloudWatch), Azure (AKS, Storage, Key Vault)
Infrastructure as Code:	Terraform, Pulumi, CloudFormation, Helm, Kustomize
Containers & Orchestration:	Docker, Kubernetes, ECS, AKS
CI/CD & Automation:	GitHub Actions, GitLab CI, Jenkins, ArgoCD
Scripting & Languages:	Python, Bash, Go (basic)
Monitoring & Logging:	Prometheus, Grafana, ELK Stack, Loki, Jaeger, CloudWatch
Networking & Security:	VPC, subnets, ALB/NLB, IAM, TLS, security groups, OIDC, Vault
Version Control & Tooling:	Git, GitHub, GitLab, ArgoCD, Artifactory

EDUCATION

University of Washington B.S. in Computer Science
Seattle, WA • Sep 2015 - Jun 2019

WORK EXPERIENCE

Shopify DevOps Engineer
San Francisco, CA • Aug 2021 - Present

- Delivered a fully declarative deployment model using **Terraform**, **Kubernetes**, **Helm**, and **ArgoCD**, designing modular IaC patterns with **parameterized state separation**, **immutable environment baselines**, and **GitOps reconciliation loops**, slashing config drift events by **95%** and stabilizing release pipelines for **30+ microservices**.
- Engineered a high-throughput CI/CD system using **GitHub Actions**, **GitLab CI**, and **container layer caching**, optimizing build graphs, dependency hydration, and test distribution across parallel runners using **dynamic job fans**, reducing build times from **14m** to **5m** (~**64%**) and doubling deployment throughput during peak hours.
- Tuned **Kubernetes** workload performance using **HPA/VPA policies**, **pod disruption budgets**, **resource quantization**, and **priority classes**, combined with Prometheus-driven saturation signals to right-size CPU/memory allocations and trim cluster footprint by **28%** while maintaining p99 latency under **180ms** during holiday load.
- Implemented progressive delivery via **canary batches**, **header-based routing**, and **SLI-driven rollback gates** using **Envoy** and **OpenTelemetry**, enabling automated rollback within **90 seconds** when early-stage degradation exceeded error-rate budgets.

- Built a full observability layer using **Prometheus**, **Alertmanager**, **Loki**, **Grafana**, and **Jaeger**, instrumenting services with **OpenTelemetry** traces, **RED/USE dashboards**, and **log correlation indexes**, cutting mean diagnostic time from **45m** to **8m**.

NexTrade Digital DevOps Engineer — Portland, OR • Jul 2019 - Jul 2021

- Developed **AWS** infrastructure using **Terraform**, **CloudFormation**, and **ECS**, implementing reusable network modules (**VPC layout**, **ALB routing maps**, **service mesh rules**, **RDS failover configs**) that cut environment provisioning from hours to under **20 minutes**.
- Created deployment pipelines using **Jenkins** and **GitHub Actions**, integrating **artifact fingerprinting**, **pre-deploy smoke jobs**, **sidecar scanning**, and **transaction-level health probes**, improving deployment reliability by **38%** and reducing manual intervention across release cycles.
- Built shell scripts and custom **Python**/**Bash** automation for **config synchronization**, **log extraction**, **secret hydration**, and **bootstrap routines**, eliminating **12-15 hours** per sprint of repetitive operational work while raising onboarding speed for new engineers by **50%**.
