

PROFILE SUMMARY

- Senior AWS Engineer with 8 years of experience running AWS production environments at consumer SaaS scale across developer collaboration, productivity SaaS, and ITSM platforms, specializing in Well-Architected reviews, EKS on Fargate, and Terraform-driven landing zones.
- Hands-on coverage across compute (EKS on Fargate), IaC (Terraform), CI/CD (GitHub Actions), observability (CloudWatch with Datadog), and serverless (Lambda with Step Functions), with networking grounded in hub-and-spoke Transit Gateway with PrivateLink and certified on AWS Solutions Architect Professional.
- Deep expertise in Well-Architected reviews across all six pillars, multi-account landing zones with Control Tower, event-driven serverless with EventBridge and Step Functions, and FinOps tagging and Savings Plans optimization, applying methodologies such as GitOps-style Terraform with reusable modules and remote state and least-privilege IAM with SCPs and permission boundaries to deliver secure, cost-aware AWS estates that hold up under SOC 2 and customer load.
- Engaged collaborator working cross-functionally with Platform, Security, SRE, Product, and Finance teams in multi-account, review-heavy cloud platform teams, contributing to architecture review boards, on-call rotations, and cost-review forums with an ownership-first mindset and clean handoffs.
- Mentor who shares technical excellence and fosters a culture of secure, well-tagged AWS infrastructure and cost-aware, Well-Architected practice through PR reviews and module docs, while running the internal AWS guild and architecture review board and authoring widely used Terraform module and landing-zone templates.

TECHNICAL SKILLS

Compute & Containers:	EKS on Fargate, EC2, Lambda, ECS on Fargate, EKS, AWS Batch, App Runner, Lightsail, Auto Scaling, Elastic Load Balancing
Networking & Edge:	hub-and-spoke Transit Gateway with PrivateLink, VPC, subnets, route tables, Transit Gateway, PrivateLink, VPC Endpoints, Direct Connect, Site-to-Site VPN, Route 53, CloudFront, Global Accelerator, Security Groups, NACLs
Identity, Security & Compliance:	IAM, IAM Identity Center, SCPs, permission boundaries, KMS, Secrets Manager, WAF, Shield, GuardDuty, Security Hub, AWS Config, CloudTrail, Macie, Inspector, SOC 2, HIPAA, PCI DSS
Storage & Database:	S3, EBS, EFS, FSx, RDS, Aurora, DynamoDB, ElastiCache, MemoryDB, OpenSearch, Neptune, DocumentDB, Timestream, AWS Backup, cross-region replication
Infrastructure as Code:	Terraform, CloudFormation, AWS CDK (TypeScript, Python), Pulumi, AWS SAM, Terragrunt, Terraform modules, remote state on S3, DynamoDB locking
CI/CD & Automation:	GitHub Actions, CodePipeline, CodeBuild, CodeDeploy, CodeCommit, GitLab CI, Jenkins, Systems Manager, Patch Manager, Run Command, Session Manager
Serverless & Event-Driven:	Lambda with Step Functions, API Gateway, EventBridge, SQS, SNS, Step Functions, AppSync, Kinesis Data Streams, Amazon MSK, DynamoDB Streams, fan-out, saga
Observability, Cost & FinOps:	CloudWatch with Datadog, CloudWatch Logs, CloudWatch Metrics, CloudWatch Alarms, CloudWatch Synthetics, X-Ray, OpenTelemetry, Datadog, New Relic, Grafana, Cost Explorer, AWS Budgets, Savings Plans, Reserved Instances, Spot, Compute Optimizer
Certifications & Frameworks:	AWS Solutions Architect Professional, AWS Solutions Architect Associate, AWS DevOps Engineer Professional, AWS Security Specialty, AWS Well-Architected Framework, AWS Organizations, Control Tower, Landing Zone Accelerator, FinOps tagging

EDUCATION

WORK EXPERIENCE

Atlassian Senior AWS Engineer

Sydney, Australia • Mar 2021 - Present

- Owned AWS architecture and solution design end to end on the **cloud platform powering Jira and Confluence on AWS** serving **260K paying tenants**, shipping **EKS workloads, Aurora fleets**, and **event mesh** across **74 AWS accounts** reviewed against all six Well-Architected pillars.
- Ran core compute and containers on **EKS on Fargate with Karpenter autoscaling and Graviton node groups**, blue/green deploys on ECS Fargate for stateful add-ons, and Lambda with provisioned concurrency on latency-critical paths across **180 production workloads**, pulling Lambda cold-start from **1.8s** down to **220ms** on the tenant-auth path.
- Owned AWS networking with **Transit Gateway hub-and-spoke with PrivateLink and Route 53 Resolver**, tightened Security Groups and NACLs on every spoke, layered CloudFront and Global Accelerator on the customer edge, and routed **42 VPCs** through private endpoints, cutting NAT egress cost by **63%** in the first two quarters.
- Hardened identity, security, and compliance with **IAM Identity Center with SCPs, KMS multi-region keys, and GuardDuty plus Security Hub**, WAF rules tuned to bot traffic, Secrets Manager rotation on every database, and AWS Config rules bound to permission boundaries, dropping critical findings by **78%** and clearing SOC 2 controls at a **100%** pass rate across the last two audit windows.
- Designed storage and database services around **Aurora PostgreSQL global database with DynamoDB and S3 Intelligent-Tiering**, EFS for shared workspace state, FSx for legacy file shares, ElastiCache for hot paths, and AWS Backup vaults for cross-region DR across an **14PB S3 estate**, cutting Aurora p99 query latency on the search path by **62%**.
- Drove infrastructure as code with **Terraform with reusable modules, remote state on S3, and CDK for app constructs**, CloudFormation for one-off compliance baselines, Terragrunt for environment fan-out, and policy gates with Checkov on every PR, authoring **48 modules** and dropping new-account provisioning from **5 days** to **35 minutes**.
- Ran CI/CD, DevOps, and automation through **GitHub Actions with OIDC into AWS, CodeDeploy blue/green, and Systems Manager patching**, drift detection on every Terraform plan, and chat-ops runbooks for break-glass scenarios, holding **430 deploys** per week across the estate at a **1.4%** change failure rate.

Canva AWS Cloud Engineer

Sydney, Australia • Dec 2017 - Feb 2021

- Built serverless and event-driven architectures with **Lambda with EventBridge, SQS fan-out, and Step Functions saga orchestration**, DynamoDB Streams for change capture, Kinesis for analytics ingest, and AppSync for client subscriptions, lifting event throughput from **9k/s** to **78k/s** across a fleet of **320 production Lambda functions**.
- Owned observability and cost management with **CloudWatch dashboards with X-Ray traces, Cost Explorer reviews, and Savings Plans coverage**, Synthetics canaries on every public endpoint, anomaly alarms tied to PagerDuty, and Compute Optimizer rightsizing on every cycle, pulling incident MTTD from **22 min** down to **3 min** and cutting monthly AWS spend by **34%** without slowing release pace.
- Led migration and modernization work using **DMS plus Application Migration Service with refactoring waves into containers and Lambda**, Snow Family appliances for the heavier media tiers, and AMS-style runbooks for cutover gates, moving **95 workloads** off legacy data centers inside an **11 months** window with zero customer-visible downtime.
- Stood up multi-account governance through **AWS Organizations with Control Tower landing zone, SCP guardrails, and FinOps tagging policy**, chargeback dashboards for every product team, and Landing Zone Accelerator blueprints for new business units, onboarding **38 net-new AWS accounts** under a single audit-ready posture.
