

PROFILE SUMMARY

- Infrastructure Engineer with 7 years of experience designing and operating internal developer platforms across consumer-internet platforms, content delivery, and developer tooling, specializing in Kubernetes platforms, infrastructure as code, and reliability engineering.
- Solid technical background across cloud (AWS, GCP), IaC tools (Terraform, Pulumi), container orchestration (Kubernetes, Helm + Istio), CI/CD (GitHub Actions, ArgoCD), and languages (Go, Python) with strong fundamentals in Linux internals, networking, and Bash automation.
- Deep expertise in internal developer platforms, Kubernetes-native architecture, GitOps workflows, and zero-downtime deployments, leveraging methodologies such as golden paths and paved roads to drive scalable, secure, and cost-efficient infrastructure platforms.
- Engaged collaborator working cross-functionally with Application, Security, and Finance teams in Agile environments, contributing to architecture reviews, platform-roadmap discussions, and post-incident retrospectives with a pragmatic, ownership-first mindset.
- Emerging leader who shares technical excellence and fosters a culture of platform thinking and developer-experience focus through PR reviews and runbooks, while leading infrastructure guild sessions and authoring widely adopted Terraform module templates.

TECHNICAL SKILLS

Cloud Platforms:	AWS (EKS, EC2, RDS, S3, IAM), GCP (GKE, Cloud SQL), Azure (AKS)
Infrastructure as Code:	Terraform, Pulumi, CloudFormation, Ansible, Helm
Containers & Orchestration:	Kubernetes, Docker, Helm, Istio, Argo Rollouts
CI/CD & Delivery:	GitHub Actions, ArgoCD, GitLab CI, Jenkins, Flux
Networking & Connectivity:	VPC, Transit Gateway, Route 53, CloudFront, VPN, BGP
Security & IAM:	IAM, Vault, KMS, Trivy, SOC 2, ISO 27001
Observability & Monitoring:	Prometheus, Grafana, OpenTelemetry, Datadog, ELK, Loki
Languages & Scripting:	Go, Python, Bash, SQL, YAML

EDUCATION

University of Michigan B.S. in Computer Science

Ann Arbor, MI • Sep 2014 - May 2018

WORK EXPERIENCE

Reddit Senior Infrastructure Engineer

New York, NY • Sep 2022 - Present

- Own the end-to-end infrastructure platform for content-serving services at 15M+ DAU, leading design across cloud architecture, container orchestration, and CI/CD for 80+ microservices in a polyglot AWS + GCP environment.
- Authored the Terraform and Pulumi module library for cluster, network, and database provisioning, shipping reusable bootstrap modules, policy-as-code via Sentinel, and drift-detection automation, cutting per-team onboarding lead time from 2 weeks to 1 day across 40+ engineering teams.
- Built the CI/CD platform on GitHub Actions and ArgoCD with GitOps deployment, progressive delivery via Flagger, and automated rollback on SLO breach, operating 220+ pipelines and cutting commit-to-prod lead time from 4 hours to 18 minutes.
- Operated Kubernetes clusters across 3 regions with Istio service mesh, Helm chart standardization, and horizontal pod

autoscaling, supporting **80+** services with **99.95%** control-plane availability.

- Designed the multi-cloud VPC architecture on **Transit Gateway peering** with service discovery via **HashiCorp Consul** and centralized ingress hardening through WAF and inspection VPCs, connecting **40+** accounts at **62ms p95** cross-cloud latency.
- Implemented the multi-cloud IAM strategy on **least-privilege roles**, secrets management via **HashiCorp Vault**, and container image scanning via **Trivy**, meeting **SOC 2 Type II** and **ISO 27001** controls and reducing audit findings from **28** to **0** across two consecutive cycles.
- Established the SLI/SLO program for **20** tier-1 services, defining **EKS autoscaling policies**, load testing via **k6**, and **quarterly** capacity-headroom reviews that absorbed a **3.5x** holiday traffic surge with zero degradation.

Pinterest **Infrastructure Engineer**

San Francisco, CA • Jul 2019 - Aug 2022

- Built the unified observability stack on **Prometheus** and **Grafana**, defining **SLO dashboards**, distributed tracing, and structured logging for **45** services and reducing mean time to detect from **22 minutes** to **2 minutes**.
- Served as on-call rotation lead for the platform team, coordinating **35** SEV1/SEV2 incidents and facilitating the team's blameless postmortem program with action-item tracking and a **weekly incident review board**, lifting close rate from **48%** to **91%** within three quarters.
- Drove the FinOps program around a **Reserved Instance and Savings Plan portfolio**, org-wide tagging policy, and rightsizing automation via **Cloud Custodian**, cutting annual cloud spend by **24%** (~\$5.2M) without service-level impact.
- Partnered with **Application, Security, and Finance** teams across **6** product domains on platform standards, compliance controls, and cost-allocation policies, authoring **9** platform RFCs that shaped the org's golden-path rollout and onboarding **13** new infrastructure engineers.
