

## PROFILE SUMMARY

- Platform Engineer with 7 years of experience building internal developer platforms across developer tooling, online travel, and SaaS scaleups, specializing in Backstage golden paths, Crossplane abstractions, and multi-tenant Kubernetes operations.
- Solid technical background across developer portals (Backstage), infrastructure as code (Terraform, Crossplane), container platforms (EKS, Istio), CI/CD delivery (ArgoCD, GitHub Actions), observability (OpenTelemetry, Prometheus), and languages (Go, Python) with strong fundamentals in policy-as-code, golden-path design, and multi-tenant reliability.
- Deep expertise in self-service infrastructure, paved-road golden paths, multi-tenant Kubernetes operation, and progressive delivery, leveraging methodologies such as platform-as-product practice and Team Topologies stream-aligned support to drive fast, safe, and self-service developer flow.
- Engaged collaborator working cross-functionally with Application, SRE, and Security teams in platform-as-product environments, contributing to platform RFCs, paved-road governance, and post-incident retrospectives with a user-first, ownership-first mindset.
- Emerging leader who shares technical excellence and fosters a culture of developer-experience obsession and paved-road discipline through RFC reviews and platform office hours, while leading platform-engineering guild sessions and authoring widely adopted golden-path and Crossplane composition templates.

## TECHNICAL SKILLS

|                              |                                                                                                                                      |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Internal Developer Platform: | Backstage (Software Catalog, Scaffolder, TechDocs), Port, OpsLevel, golden-path templates, platform portals                          |
| CI/CD & Delivery:            | ArgoCD, Flux, GitHub Actions, Argo Workflows, GitLab CI, progressive delivery (Argo Rollouts, Flagger), feature flags (LaunchDarkly) |
| Container & Orchestration:   | Kubernetes (EKS, GKE, AKS), Helm, Kustomize, Istio, Linkerd, Cilium, KubeVela, Karpenter                                             |
| Infrastructure as Code:      | Terraform, Pulumi, Crossplane (compositions, providers), Helm, Cluster API, OpenTofu                                                 |
| Observability:               | OpenTelemetry (SDK + Collector), Prometheus, Grafana, Tempo, Loki, Datadog, Honeycomb, PromQL                                        |
| Security & Policy:           | OPA / Rego, Kyverno, External Secrets Operator, Trivy, SBOMs (Syft, Gype), Cosign / Sigstore                                         |
| Cloud & Platform APIs:       | AWS (EKS, IAM, EventBridge, S3), GCP (GKE, Pub/Sub), gRPC, OpenAPI, Backstage Software Catalog APIs                                  |
| Languages & SDKs:            | Go, Python, TypeScript, Bash, Kubernetes Operator SDK, Helm Charts, Rego                                                             |

## EDUCATION

University of Washington B.S. in Computer Science

Seattle, WA • Sep 2014 - Jun 2018

## WORK EXPERIENCE

GitHub Senior Platform Engineer

Seattle, WA • Aug 2022 - Present

- Owned the internal developer platform for the Actions and Codespaces engineering org supporting 1,200+ engineers, leading end-to-end design across golden-path templates, service catalog, and runtime abstractions for the build, test, and deploy lifecycle of 620+ production microservices.
- Built the developer portal on Backstage with scaffolder templates, self-service infra requests, and on-call onboarding flows, cutting first-merge-to-prod time for new hires from 3.4 weeks to 6 days and lifting platform NPS from 23 to 58.

- Designed reusable build, test, and deploy pipelines on **GitHub Actions** and **ArgoCD** with **Argo Rollouts** canary deploys, blue/green workflow templates, and **LaunchDarkly** feature-flag gates, cutting CI minutes per PR by **41%** and onboarding **180+** services onto progressive delivery with no per-team pipeline work.
- Operated the multi-tenant Kubernetes platform across **14** production EKS clusters with **Istio** service mesh, applying **namespace-as-tenant** isolation, Cilium-based pod networking, and mesh-managed mTLS, sustaining **92,000 daily pod starts** at **99.97%** cluster availability across the past 6 quarters.
- Built self-service infrastructure modules with **Terraform** and **Crossplane** exposed as **Backstage** scaffolder templates, covering **Postgres** and **Redis** blueprints, EKS namespace and IAM bindings, and S3 plus EventBridge buses, letting product teams self-serve **95%** of infra requests and cutting platform ticket volume by **62%**.
- Standardized observability across the org with **OpenTelemetry** auto-instrumentation, **Prometheus** and **Grafana** dashboards, and **Tempo** plus **Loki** log/trace correlation, lifting traced-service coverage from **38%** to **91%** and saving downstream teams an estimated **12 engineer-weeks** per quarter.
- Embedded policy-as-code guardrails on **OPA** with **OPA Gatekeeper** admission policies, Kyverno image and pod policies, and Sigstore Cosign image signing, blocking **99.1%** of non-compliant deploys and clearing **zero** high-severity findings on the **FY24 SOC 2 + SLSA-2** audits.

## Expedia Group **Platform Engineer**

Seattle, WA • Jun 2019 - Jul 2022

- Built a self-service infrastructure provisioning API on top of Terraform Cloud and AWS Service Catalog, exposing **Postgres** and **Redis** blueprints, S3 and EKS namespace bundles, and environment-scoped IAM and secrets to **340+** engineers, dropping infra-request lead time from **9 days** to **4 hours**.
- Re-architected the multi-tenant CI fleet onto Karpenter-backed Kubernetes with **Karpenter spot autoscaling**, namespace-fair CPU and memory quotas, and noisy-neighbor isolation via cgroups v2 across **1,400 runners**, sustaining **99.8%** CI availability while cutting hourly compute spend by **51%**.
- Maintained the central monorepo build system (Bazel + GitHub Actions composite actions) supporting **220+** services, lifting Bazel cache hit rate from **64%** to **87%** and trimming median PR feedback time from **18 minutes** to **7 minutes**.
- Worked closely with **SRE**, **Security**, and **Application Platform** partners to coordinate **Backstage** pilot rollout, golden-path authoring, and on-call rotation design across **80** services in **4** product domains, mentoring **3** new platform engineers through their first on-call rotations and golden-path authoring.
