

PROFILE SUMMARY

- SOC Analyst with 6 years of experience operating enterprise security operations centers across SaaS, financial services, and managed-security clients, specializing in SIEM-driven detection, EDR investigation, and phishing analysis.
- Hands-on coverage across SIEM platforms (Splunk, Microsoft Sentinel), EDR/XDR (CrowdStrike Falcon, SentinelOne), email security (Proofpoint), SOAR automation (Splunk SOAR), threat intelligence (MISP), and scripting (Python, PowerShell) with strong fundamentals in MITRE ATT&CK mapping, on-call discipline, and audit-ready incident documentation.
- Deep expertise in MITRE ATT&CK-aligned detection coverage, defense-in-depth response, alert-triage discipline, and threat-intel-driven hunting, leveraging methodologies such as follow-the-sun on-call rotations and weekly purple-team exercises to drive fast, well-documented incident response with measurable MTTD and MTTR improvements.
- Engaged collaborator working cross-functionally with Detection Engineering, IT, and Legal teams in NIST CSF-aligned environments, contributing to incident bridges, tabletop exercises, and post-incident reviews with a calm, evidence-first temperament.
- Emerging leader who shares technical excellence and fosters a culture of alert hygiene and postmortem discipline through case reviews and playbook authoring, while leading weekly detection-engineering study sessions and authoring widely used triage and IR templates.

TECHNICAL SKILLS

SIEM & Log Platforms:	Splunk, Microsoft Sentinel, IBM QRadar, Google Chronicle, Elastic Security
EDR & Endpoint Security:	CrowdStrike Falcon, SentinelOne, Microsoft Defender for Endpoint, VMware Carbon Black
Email Security:	Proofpoint, Mimecast, Defender for O365, Cofense, KnowBe4
Threat Intelligence & Hunting:	MISP, Recorded Future, ThreatConnect, MITRE ATT&CK, OSINT pivoting
Detection Engineering & Query:	Sigma, KQL, SPL, YARA, Snort/Suricata, Splunk SOAR, Cortex XSOAR
Frameworks & Compliance:	MITRE ATT&CK, NIST CSF, ISO 27001, SOC 2, PCI DSS, NIST 800-61
Forensics & Network Analysis:	Volatility, FTK Imager, Autopsy, Wireshark, Zeek, tcpdump, Velociraptor
Scripting & Automation:	Python, PowerShell, Bash, REST APIs, Jupyter notebooks

EDUCATION

The University of Texas at Austin **B.S. in Computer Science, minor in Information Security**

Austin, TX • Sep 2015 - May 2019

WORK EXPERIENCE

Cloudflare **Senior SOC Analyst**

Austin, TX • Mar 2022 - Present

- Owned security monitoring and alert triage across Cloudflare's global edge and corporate environment supporting 3,200+ employees, working 18,000+ alerts per week through SIEM-driven detection, multi-tool correlation, and on-call escalation on Splunk and Microsoft Sentinel.
- Drove end-to-end incident investigation for 220+ confirmed incidents spanning endpoints, identity providers, AWS workloads, and edge logs, applying signal correlation across SIEM and EDR, attacker-timeline reconstruction, and scope-and-impact assessment, lifting the true-positive rate from 6% to 22%.
- Ran endpoint detection and response on CrowdStrike Falcon and SentinelOne across 4,500+ endpoints, executing one-click host isolation playbooks, process-tree investigation, and IOC sweep automation, pulling attacker dwell time from 14

hours down to **38 minutes**.

- Led detection engineering and rule tuning using **Sigma rules** for SIEM-agnostic coverage, KQL queries in Microsoft Sentinel, and Splunk correlation searches, authoring **120+** detection rules that cut the false-positive rate from **71%** to **18%** and lifted MITRE ATT&CK coverage from **41%** to **78%**.
- Conducted log analysis and first-responder forensics across **firewall, DNS, proxy, identity, and cloud audit logs**, performing **memory acquisition with Volatility**, packet analysis in Wireshark and Zeek, and endpoint artifact triage with Velociraptor, root-causing **95+** incidents within the first **48 hours**.
- Built threat intelligence enrichment on **MISP** sourced from **MISP, sector ISACs, and commercial vendor feeds**, applying **IOC enrichment on every alert**, ATT&CK TTP mapping for known actors, and threat-actor profile briefings, contextualizing **90%** of high-severity alerts within **5 minutes** of triage.
- Ran phishing and email threat analysis on **Proofpoint** for **8,000+** user-reported emails per year, working **header and routing analysis**, URL detonation in Proofpoint TAP, and attachment sandbox triage, cutting the phish click-through rate from **4.1%** to **0.6%**.

Optiv **SOC Analyst**

Austin, TX • Jun 2019 - Feb 2022

- Operated the incident response and containment program driving **endpoint isolation**, account disablement in Okta and AD, and IP and domain blocks at the proxy across **60+** SEV1 and SEV2 incidents, compressing mean time to respond from **2.8 hours** to **34 minutes** within the first year.
- Maintained the team's SOC playbook and runbook library including **45+ incident-response playbooks**, alert-triage runbooks per detection class, post-incident reports, and MTTD/MTTR dashboards for leadership, adopted as the SOC standard across **12** client environments and reviewed **quarterly** with the SOC lead.
- Worked closely with **client IT, Threat Intelligence, and Legal** across **12 client environments** to coordinate **containment windows**, phishing takedown requests, and detection-rule rollouts, tuning **70+** existing detection rules that became the org's triage baseline and onboarding **5** new analysts.
