

PROFILE SUMMARY

- Senior SQL Developer with 9 years of experience building enterprise transactional and analytical SQL platforms across healthcare claims, clinical analytics, and pharmacy operations, specializing in complex T-SQL, query tuning, schema design, and ETL for warehouse loading.
- Hands-on coverage across RDBMS (SQL Server), dialect (T-SQL), ETL (SSIS), BI / reporting (Power BI), and modeling (ER/Studio, Flyway) with strong fundamentals in strong set-based thinking, window functions, recursive CTEs, and execution-plan literacy across multiple dialects.
- Deep expertise in normalized OLTP schema design, star schema and dimensional modeling, indexing and partitioning strategy, and ETL pipeline design into warehouse marts, applying methodologies such as execution-plan-driven tuning with statistics review and set-based rewrites of cursor and loop logic for warehouse-scale workloads to deliver fast, accurate SQL platforms fit for regulated healthcare and enterprise reporting.
- Engaged collaborator working cross-functionally with Analytics, Application, DBA, and Compliance teams in Agile delivery and quarterly release trains, contributing to schema reviews, sprint planning, and query-design walkthroughs with an ownership-first mindset and clean handoffs.
- Mentor who shares technical excellence and fosters a culture of data accuracy and query-review discipline through PR reviews and pattern docs, while running SQL guild and tuning office hours and authoring widely used procedure and reconciliation templates.

TECHNICAL SKILLS

Databases & Dialects:	T-SQL, PL/SQL, PL/pgSQL, ANSI SQL, SQL Server, Oracle, PostgreSQL, MySQL, Db2, Python (basic)
Schema Design & Modeling:	3NF normalization, star schema, snowflake schema, OLTP modeling, OLAP modeling, ER/Studio, ERD design, PK/FK design, referential integrity
Procedural SQL & Objects:	stored procedures, functions, triggers, packages, cursors, CTEs, window functions, recursive queries, pivots, merge / upsert
Query Tuning & Indexing:	execution plans, index strategy, query rewrites, statistics, hints, partitioning, SARGable predicates, covering indexes, columnstore, Query Store
ETL & Data Integration:	SSIS, Informatica, Talend, Azure Data Factory, SQL-based ELT, staging / loading, CDC, incremental loads, data warehouse loading
Reporting & BI:	Power BI, SSRS, Tableau, Looker, views, materialized views, reusable datasets, KPI rollups, dimensional reporting
Source Control & Deployment:	Git, Flyway, Liquibase, Redgate, dbt, Azure DevOps, GitHub Actions, Jenkins, change scripts, DBA collaboration
Security & Compliance:	roles and schemas, least-privilege, row-level security, dynamic data masking, TDE, column encryption, auditing, HIPAA / PHI handling, PII redaction

EDUCATION

Northeastern University **B.S. in Computer Science**

Boston, MA • Sep 2013 - May 2017

WORK EXPERIENCE

CVS Health **Senior SQL Developer**

Boston, MA • Apr 2020 - Present

- Owned complex SQL development and end-to-end delivery on the pharmacy claims and clinical reporting platform handling

38M claims rows / day, writing **claims ingestion**, **rebate reconciliation**, and **formulary reporting** queries across **6 databases** on modern SQL Server.

- Designed and evolved schemas in **ER/Studio** following **3NF OLTP with a star-schema mart**, defining PKs, FKs, check constraints, and indexes across **320+** tables with **450+** enforced FK relationships, holding referential integrity through every release.
- Built procedural logic with **T-SQL** stored procedures, scalar and table-valued functions, and audit triggers, leaning on **modular T-SQL with table-valued parameters** to consolidate **180+** procs into a shared layer, cutting duplicated business logic across the platform by **46%**.
- Tuned slow reports and ingestion paths with **execution-plan analysis with statistics refresh** and **SARGable rewrites**, Query Store baselines, and parameter-sniffing fixes across **120+** slow queries, pulling the month-end formulary report runtime from **42 min** down to **6 min** on the same hardware footprint.
- Drove indexing and physical design with **covering and columnstore indexes with monthly partitioning**, filegroup placement, and filtered indexes against the **SQL Server** claims tables, redesigning **85** indexes and trimming logical reads per claims-search batch by **71%**.
- Published analytical SQL for **Power BI** and SSRS dashboards through **reusable views and materialized datasets**, window-function rollups, and indexed views across **45+** shared datasets, dropping the analyst refresh window during quarter-close by **58%**.
- Owned warehouse loading with SSIS packages and SQL-based ELT, with **incremental SSIS loads with CDC and watermarks** across **32** nightly jobs moving **2.4 TB** into the claims mart, cutting the overnight load window by **63%**.

Liberty Mutual **SQL Developer**

Boston, MA • Jul 2017 - Mar 2020

- Owned data quality and reconciliation across the policy and claims warehouse with **reconciliation queries with row-count and hash checks**, duplicate-detection CTEs, and orphan-record sweeps across **60+** scheduled validation checks, dropping duplicate policy records reaching downstream BI by **72%**.
- Hardened database security and access control with **role-based access with row-level security and dynamic data masking**, schema-scoped GRANTS, and PII redaction reviews across **22** least-privilege roles, lifting the annual SOX audit and dropping privileged-access findings by **64%**.
- Shipped database changes through source control and DBA partnership with **versioned Flyway migrations through Azure DevOps pipelines**, pre-deploy review gates, and rollback scripts on every change across **80+** production releases, cutting failed deploys traced to DDL or DML scripts by **78%**.
- Strengthened core SQL foundations across the team through **window functions, recursive CTEs, and pivots**, set-based rewrites of cursor logic, and dialect breadth across SQL Server and Oracle, while mentoring **3** junior developers through pair-coding, review checklists, and a written modern-SQL idiom guide.
