

PROFILE SUMMARY

- **Network Engineer** with 8 years of experience operating enterprise networks across SaaS, colocation, and enterprise IT, specializing in multi-vendor routing and switching, network security, and SD-WAN.
- Solid technical background across routing and switching (Cisco IOS-XE, Juniper Junos), firewalls (Palo Alto Networks), wireless (Cisco Meraki), SD-WAN (Cisco SD-WAN (Viptela)), cloud connectivity (AWS Direct Connect, Azure ExpressRoute), load balancing (F5 BIG-IP), monitoring (SolarWinds, ThousandEyes), and automation languages (Python, Bash) with strong fundamentals in protocol-level fluency, packet-capture diagnostics, and audit-grade documentation.
- Deep expertise in high-availability network design, defense-in-depth segmentation, software-defined networking, and zero-touch provisioning, leveraging methodologies such as change-management workflows and quarterly failover drills to drive resilient, high-throughput, and secure networks.
- Engaged collaborator working cross-functionally with Security, DevOps, and IT teams in ITIL-aligned, change-controlled environments, contributing to change-advisory boards, design reviews, and post-incident retrospectives with a pragmatic, ownership-first mindset.
- Emerging leader who shares technical excellence and fosters a culture of protocol rigor and diagram and runbook discipline through PR reviews and runbooks, while leading network-engineering guild sessions and authoring widely adopted runbook and design templates.

TECHNICAL SKILLS

Routing & Switching:	Cisco IOS-XE, Juniper Junos, Arista EOS, BGP, OSPF, EIGRP, IS-IS, VLAN, STP, EtherChannel
Network Security:	Palo Alto Networks, Fortinet, Cisco ASA, IDS/IPS (Snort, Suricata), NAC (Cisco ISE), Zero Trust, ACLs
Wireless:	Cisco Meraki, Aruba Central, Ubiquiti UniFi, Ekahau site surveys, 802.11ac/ax, RF tuning
WAN & SD-WAN:	MPLS, IPsec VPN, SSL VPN, Cisco SD-WAN (Viptela), VeloCloud, Meraki SD-WAN, ISP management
Cloud & Hybrid Networking:	AWS VPC, Azure VNet, GCP VPC, Direct Connect, ExpressRoute, Transit Gateway, cloud-native firewalls
Monitoring & Load Balancing:	SolarWinds, ThousandEyes, PRTG, Nagios, NetFlow, Wireshark, F5 BIG-IP, Citrix ADC, NGINX, HAProxy, GSLB
Automation & NetDevOps:	Ansible, Python (Netmiko, NAPALM), Terraform, Git, NETCONF/YANG, Jinja2 templating
Protocols & Foundations:	TCP/IP, IPv4/IPv6, HSRP/VRRP, MPLS, QoS, Multicast, DNS, DHCP, IPAM, RADIUS/TACACS+

EDUCATION

Cal Poly San Luis Obispo **B.S. in Computer Engineering**

San Luis Obispo, CA • Sep 2014 - May 2018

WORK EXPERIENCE

Salesforce **Senior Network Engineer**

San Francisco, CA • Sep 2021 - Present

- Own network architecture and design for the multi-region SaaS production network, leading topology across campus LAN, data center fabric, and WAN backbone at 60+ global sites with 900+ switches, routers, and firewalls under a single design standard.
- Operate enterprise routing and switching using BGP, OSPF, and EIGRP across Cisco Catalyst 9k, Nexus 9k, and Juniper QFX, applying VLAN segmentation, STP and EtherChannel design, and trunking with link aggregation, holding core uptime at 99.99% through the year.

- Hardened the network security posture with next-gen firewall policies on **Palo Alto**, IDS/IPS signatures, and NAC enforcement via **Cisco ISE** under Zero Trust micro-segmentation, blocking **3,200+** critical threat events and shifting lateral-movement risk from **moderate** to **contained**.
- Designed and tuned enterprise wireless on **Cisco Meraki** across **1,200+** access points, driving **Ekahau** site surveys, RF channel and power tuning, and SSID and controller policy hardening for clean coverage across **14** office floors in **6** cities.
- Modernized WAN and SD-WAN connectivity across **60+** branch and remote sites via MPLS-to-SD-WAN migration on **Cisco Viptela**, IPsec and SSL VPN tunnels, and ISP diversity with carrier failover, cutting branch latency from **180 ms** to **62 ms**.
- Engineered hybrid cloud connectivity spanning **AWS and Azure** across **4** regions, delivering **AWS Direct Connect** and Azure ExpressRoute circuits, Transit Gateway and VNet hub-and-spoke peering, and cloud-native firewalls, sustaining **40 Gbps** across the hybrid edge.
- Built end-to-end network observability on **SolarWinds** and **ThousandEyes** covering **900+** devices and **60** site links, with **NetFlow** and sFlow baselining, path-aware synthetic probes, and threshold-based alerting, reducing mean time to detect from **22 min** to **3 min**.

Equinix **Network Engineer**

Sunnyvale, CA • Jul 2018 - Aug 2021

- Owned application traffic management for **80+** customer-facing apps using **F5 BIG-IP** virtual servers and iRules, DNS-based GSLB across **3** regions, and NGINX and HAProxy for microservice routing, sustaining **99.97%** measured uptime through the on-call year.
- Cut operational toil from **34%** to **11%** with **Ansible** playbooks for switch and firewall configuration, **Python** scripts on Netmiko and NAPALM for bulk changes, and Git-based config repos with peer review, reclaiming **320+** engineer-hours per quarter.
- Led incident response across **38** SEV1/SEV2 network incidents during on-call rotations, running **Wireshark** and tcpdump packet captures, syslog and SNMP log correlation, and postmortems with owner-tagged follow-ups, cutting mean time to resolve from **2.8 hr** to **34 min** and curating **200+** network diagrams, IPAM records, and runbooks.
- Worked closely with **Security, DevOps, and Data Center Operations** teams across **7** colocation data centers on change-management windows, cross-connect provisioning, and capacity planning reviews, authoring **12** network design RFCs that shaped the org's network standard and onboarding **5** new network engineers.
