
PROFILE SUMMARY

- **System Administrator with 8 years of experience** operating enterprise IT environments across aerospace engineering, telecommunications, and enterprise IT, specializing in **Linux + Windows administration, virtualization, and enterprise security hardening**.
- Solid technical background across operating systems (RHEL, Windows Server), virtualization (VMware vSphere), automation (Ansible, PowerShell), monitoring (Datadog, Nagios), and languages (Bash, Python) with strong fundamentals in networking fundamentals, change management, and audit-grade documentation.
- Deep expertise in enterprise-grade reliability, defense-in-depth security, configuration management, and zero-touch provisioning, leveraging methodologies such as change-management workflows and quarterly DR drills to drive stable, secure, and well-documented infrastructure.
- Engaged collaborator working cross-functionally with Engineering, Security, and Help Desk teams in ITIL-aligned environments, contributing to change-advisory boards, audit prep, and post-incident retrospectives with a pragmatic, ownership-first mindset.
- Emerging leader who shares technical excellence and fosters a culture of operational rigor and documentation discipline through PR reviews and runbooks, while leading IT-ops guild sessions and authoring widely adopted runbook and SOP templates.

TECHNICAL SKILLS

Operating Systems:	RHEL, Ubuntu, CentOS, Debian, Windows Server 2019/2022
Virtualization & Containers:	VMware vSphere, Hyper-V, Proxmox, KVM, Docker
Networking:	Cisco IOS, VLAN, DNS, DHCP, VPN (IPSec, OpenVPN), pfSense, Palo Alto firewalls
Security & Compliance:	CIS benchmarks, CrowdStrike EDR, Tenable, MFA, SOC 2, ISO 27001
Monitoring & Backup:	Datadog, Nagios, Zabbix, SolarWinds, Veeam, Commvault
Automation & Config:	Ansible, Puppet, Chef, PowerShell DSC, Terraform
Scripting Languages:	Bash, PowerShell, Python, Perl
Storage & Identity:	NetApp SAN, Dell EMC, NFS/SMB, Active Directory, Okta SSO, LDAP

EDUCATION

University of Colorado Boulder **B.S. in Information Technology**

Boulder, CO • Sep 2014 - May 2018

WORK EXPERIENCE

Lockheed Martin Space **Senior Systems Administrator**

Denver, CO • Sep 2021 - Present

- Owned server and OS administration for the **Space Systems engineering** environment supporting **2,500+ engineers**, leading day-to-day operation across **Linux fleet maintenance, Windows Server administration, and VMware virtualization** for **600+ servers** in a hybrid on-prem + Azure environment.
- Managed user, group, and access policies for **8,000+ accounts** across **Active Directory and Okta SSO**, applying **role-based access control** with least-privilege provisioning and automated joiner/leaver workflows from HR feeds, reducing access-related help-desk tickets by **48%**.
- Configured and maintained enterprise networking covering **VLAN segmentation, DNS and DHCP, site-to-site VPNs, and firewall rule policies** across **40+ Cisco switches** at **3 office sites**, holding **99.98% LAN uptime** under change-managed maintenance windows.

- Hardened the fleet through **monthly** OS patch cycles on **CIS-benchmarked baselines**, CrowdStrike EDR rollout, and vulnerability remediation via Tenable, closing **180+** critical CVEs and lifting compliance posture from **78%** to **97%** for SOC 2 audit readiness.
- Built centralized monitoring on **Datadog** and **Nagios** for **600+** servers and **150+** services, defining **SLO-style alert thresholds** with on-call rotation rules and an alert-fatigue review cadence, cutting mean time to detect from **24 minutes** to **2 minutes**.
- Administered enterprise storage and virtualization on **NetApp SAN** and **VMware vSphere** clusters, running **120TB** of file shares and **180+ VMs** with **RAID-10** layouts, automated tiering, and vMotion migrations for zero-downtime maintenance.
- Reduced operational toil from **38%** to **14%** through **Ansible** playbooks for OS provisioning and patching, PowerShell DSC for Windows configuration, and Python scripts for inventory and audit reporting, reclaiming **480+** engineer-hours per quarter for the team.

Charter Communications **Systems Administrator**

Englewood, CO • Jul 2018 - Aug 2021

- Designed and operated the enterprise backup and disaster recovery program on **Veeam-based image backups**, Commvault for application data, and quarterly restore drills, lifting recovery point objective from **24h** to **4h** and successfully recovering **all 5** inadvertent data-loss events without impact.
- Led incident response across **42 SEV1/SEV2 outages** during on-call rotations, running **systematic root-cause analysis**, documented postmortems, and owner assignment for follow-ups, cutting mean time to resolve from **3.5 hours** to **42 minutes** within the first year.
- Maintained the team's operational documentation library covering **180+** runbooks, network and topology diagrams in **Lucidchart**, asset inventories in Snipe-IT, and standard operating procedures, clearing **2** back-to-back **SOC 2** audits with zero findings.
- Worked closely with **Engineering, Security, and Help Desk** teams across **5** office locations to coordinate **change-management windows**, patch cycles, and infrastructure projects, authoring **9** operational SOPs that shaped the org's IT-ops standard and onboarding **6** new sysadmins.
