

PROFILE SUMMARY

- Senior Android Developer with 8 years of experience building consumer-scale Android apps on the Play Store across mobile money, peer-to-peer transfer, and merchant payments, specializing in Jetpack Compose app architecture, Coroutines and Flow, and Android platform integration.
- Hands-on coverage across Kotlin 2.0, Jetpack Compose, Android Views, MVVM, Coroutines and Flow, Room, Hilt, JUnit 5, Espresso, and Java with strong fundamentals in idiomatic Kotlin, structured concurrency, and Material Design fluency.
- Deep expertise in modular feature architecture, unidirectional data flow, single-activity navigation, and offline-first data layer, leveraging methodologies such as state-driven Compose with StateFlow holders and UI / domain / data layering with use cases to drive responsive, accessible, Play-Store-ready Android apps shipped at production quality.
- Engaged collaborator working cross-functionally with Design, Product, Backend, and iOS teams in Agile and continuous-delivery environments, contributing to design-review forums, sprint planning, and architecture discussions with a pragmatic, ownership-first mindset.
- Emerging leader who shares technical excellence and fosters a culture of crash-free user rate and Play Console readiness through PR reviews and component docs, while leading Android community-of-practice sessions and authoring widely used ViewModel and feature templates.

TECHNICAL SKILLS

Languages & Toolchain:	Kotlin 1.9/2.0, Java, coroutines, Flow, sealed classes, data classes, extension functions, scope functions, delegated properties, inline classes
UI Frameworks:	Jetpack Compose, Android Views, ComposeView, AndroidView interop, Material 3, ConstraintLayout, animations, accessibility
Architecture & Patterns:	MVVM, MVI, Clean Architecture, unidirectional data flow, single-activity + Navigation, repository pattern, use cases, dependency injection
Concurrency & Reactive:	Coroutines (suspend, scopes, dispatchers, supervisors), Flow, StateFlow, SharedFlow, channels, RxJava interop, WorkManager
Jetpack & AndroidX:	ViewModel, LiveData, Lifecycle, Navigation, Room, WorkManager, DataStore, Paging 3, CameraX, Hilt, Macrobenchmark
Networking & APIs:	Retrofit, OkHttp, Ktor Client, Apollo (GraphQL), REST, kotlinx.serialization, Moshi, OAuth/OIDC, JWT
Persistence & Storage:	Room, DataStore (Preferences + Proto), SQLDelight, EncryptedSharedPreferences, offline-first sync, Single Source of Truth
Release & Testing:	JUnit 5, MockK, Turbine, Truth, Espresso, Compose Testing, Robolectric, Gradle (Kotlin DSL), App Bundles (AAB), Play App Signing, Play Console, GitHub Actions

EDUCATION

University of Nairobi B.Sc. in Computer Science

Nairobi, Kenya • Sep 2013 - Jun 2017

WORK EXPERIENCE

Safaricom Senior Android Developer

Nairobi, Kenya • Jun 2021 - Present

- Drove Android feature delivery on the M-PESA Android consumer app serving 34M monthly actives, shipping P2P transfer, bill pay, and merchant tills in idiomatic Kotlin 2.0 across 42 Gradle feature modules.
- Led the migration to Jetpack Compose with Material 3 design system, ComposeView bridges for legacy Android Views

screens, and previews wired into the design-system Storybook, rebuilding **46** screens and shipping **80+** shared composables adopted across the app.

- Owned app architecture using **MVVM with Clean Architecture**, **Hilt** for dependency injection, single-activity Navigation, and a UI / domain / data layering with use cases, refactoring **22** feature modules to a testable ViewModel boundary adopted by **7** squads across the app.
- Drove the concurrency rewrite with **Coroutines and Flow**, **StateFlow with SharedFlow events**, structured scopes wired into Lifecycle, and dispatcher discipline on IO and Default, retiring legacy RxJava and AsyncTask call sites across **260+** sites and dropping the ANR rate per release by **71%**.
- Shipped Android platform integration through **WorkManager and Foreground Services**, **CameraX** for KYC scanning, BLE for agent terminals, App Shortcuts on the launcher, and App Links with deferred deep linking across **11** surfaces, lifting deep-link engagement by **32%**.
- Owned Android testing and performance with **JUnit 5**, MockK and Turbine for Flow, **Espresso** and Compose Testing for end-to-end flows, and **Macrobenchmark with Baseline Profiles** on Perfetto traces, pulling cold startup from **2.8s** to **1.3s** and holding crash-free users at **99.6%** across the rollout.
- Owned Play Store distribution and release engineering with **Gradle (Kotlin DSL)** with **GitHub Actions**, **App Bundles (AAB)** with Play App Signing, testing tracks (internal, closed, open) wired into staged rollouts, and Data Safety + in-app updates configured per release, shipping **55+** Play Store releases and cutting staged-rollout regressions by **48%**.

Flipkart **Android Developer**

Bangalore, India • Aug 2017 - May 2021

- Built the networking and data layer with **Retrofit with OkHttp interceptors**, **kotlinx.serialization** for typed payloads, OAuth2 token refresh, and offline-cache policies wired into the repository layer across **90+** REST and GraphQL endpoints, dropping failed-call rates by **52%**.
- Built the local persistence and offline-sync layer with **Room with DataStore Proto**, **EncryptedSharedPreferences** for tokens, and a Single Source of Truth repository pattern, supporting **3.1M** records synced offline and cutting sync-conflict incidents by **63%**.
- Modernized legacy Android surfaces with **ViewModel and Navigation component**, LiveData for view state, and **Paging 3** on RecyclerView, migrating **45** screens off Loaders and Activities on a **weekly** release cadence without breaking the existing deep-link graph.
- Partnered **Design, Backend, and iOS** on the shared product roadmap, authored **6** Android architecture RFCs adopted across the consumer app, and onboarded **4** junior Android developers through **daily** PR reviews and pair programming.
