

PROFILE SUMMARY

- Senior iOS Developer with 8 years of experience building consumer-scale iOS apps on the App Store across consumer payments, peer-to-peer transfer, and merchant tooling, specializing in SwiftUI app architecture, Swift Concurrency, and Apple platform integration.
- Hands-on coverage across Swift 5.10, SwiftUI, UIKit, MVVM, Swift Concurrency, Core Data, XCTest, XCUITest, and Objective-C with strong fundamentals in protocol-oriented design, structured concurrency, and Apple human-interface fluency.
- Deep expertise in modular feature architecture, async-first data flow, testable view models, and privacy-first feature design, leveraging methodologies such as actor-isolated state with Sendable boundaries and design-system-driven SwiftUI surfaces to drive responsive, accessible, App-Store-ready iOS apps shipped at production quality.
- Engaged collaborator working cross-functionally with Design, Product, Backend, and Android teams in Agile and continuous-delivery environments, contributing to design-review forums, sprint planning, and architecture discussions with a pragmatic, ownership-first mindset.
- Emerging leader who shares technical excellence and fosters a culture of crash-free sessions and App Review readiness through PR reviews and component docs, while leading iOS community-of-practice sessions and authoring widely used view-model and feature templates.

TECHNICAL SKILLS

Languages & Toolchain:	Swift 5.10/6, Objective-C, structured concurrency, Sendable, macros, result builders, generics, Swift API design guidelines
UI Frameworks:	SwiftUI, UIKit, UIHostingController, UIViewRepresentable, Auto Layout, Combine, animations
Architecture & Patterns:	MVVM, MVC, MVI, VIPER, TCA, Clean Architecture, Coordinator, dependency injection, protocol-oriented design
Concurrency & Reactive:	Swift Concurrency (async/await, actors, AsyncSequence, Task, TaskGroup), Combine, GCD, OperationQueue
Networking & APIs:	URLSession, Alamofire, Apollo (GraphQL), REST, Codable, OAuth/OIDC, JWT, Sign in with Apple
Persistence & Storage:	Core Data, SwiftData, Realm, GRDB (SQLite), UserDefaults, Keychain, FileManager, offline-first sync
Apple Frameworks:	HealthKit, HomeKit, MapKit, CoreLocation, AVFoundation, PhotoKit, Vision, CoreML, ARKit, WidgetKit, App Intents, App Clips, APNs
Release & Testing:	XCTest, Swift Testing, XCUITest, snapshot testing, Xcode Cloud, Fastlane, GitHub Actions, App Store Connect, TestFlight, StoreKit 2

EDUCATION

Oregon State University **B.S. in Computer Science**

Corvallis, OR • Sep 2014 - Jun 2018

WORK EXPERIENCE

Cash App **Senior iOS Developer**

Portland, OR • May 2022 - Present

- Drove iOS feature delivery on the Cash App iOS consumer app serving 55M monthly actives, shipping P2P payments, card management, and investing flows in mixed SwiftUI and UIKit across 35+ feature modules.
- Owned app architecture using MVVM with Coordinator, protocol-driven dependency injection, and a modularized SwiftPM

workspace with feature libraries, refactoring **18** feature modules to a testable view-model boundary adopted by **6** squads across the app.

- Led the migration to **Swift Concurrency** with **async/await with actors**, **AsyncSequence** for streams, structured **TaskGroup** fan-out, and **Sendable** boundaries on shared state, retiring legacy **Combine** and **GCD** call sites across **220+** sites and dropping data-race incidents per quarter by **83%**.
- Built the networking and data layer with **URLSession with typed Codable clients**, retry and offline-cache policies, and **OIDC plus Sign in with Apple** for auth and token refresh across **75+** REST and GraphQL endpoints, dropping failed-call rates by **44%**.
- Shipped Apple platform integration through **WidgetKit and App Intents**, Live Activities on the lock screen, APNs-driven background refresh, and **CoreLocation**-gated transfer prompts across **9** surfaces, lifting widget engagement by **27%**.
- Drove performance and memory work with **Instruments Time Profiler**, **Allocations** and **Leaks** for retain-cycle hunts, and lazy-loaded feature modules, pulling cold launch from **2.4s** to **1.1s** and holding crash-free sessions at **99.7%** across the rollout.
- Owned iOS testing with **XCTest with Swift Testing** for unit and integration suites, **XCUITest** for end-to-end flows, and snapshot tests on the **SwiftUI** surface, lifting unit coverage from **51%** to **88%** and dropping regression escapes per release by **61%**.

Nike **iOS Developer**

Beaverton, OR • Aug 2018 - Apr 2022

- Built the local persistence and offline-sync layer with **Core Data with NSPersistentCloudKitContainer**, **Keychain**-backed secure storage for run history, and **FileManager**-cached media assets, supporting **2.3M** records synced offline and cutting sync-conflict incidents by **58%**.
- Owned App Store distribution and release engineering with **Fastlane with Xcode Cloud**, automated code-signing, App Store Connect metadata, and **TestFlight** rings for staged rollout, shipping **40+** App Store releases and rolling out a **StoreKit 2** subscription tier that reached **180k** paying subscribers.
- Modernized legacy **UIKit** surfaces with **UIHostingController bridges**, diffable data sources on **UICollectionView**, and **Auto Layout** cleanup, migrating **38** screens to **SwiftUI** without breaking the existing **UIKit** navigation stack.
- Partnered **Design, Backend, and Android** on the shared product roadmap, authored **5** iOS architecture RFCs adopted across the consumer app, and onboarded **3** junior iOS developers through PR reviews and pair programming.
