

PROFILE SUMMARY

- Senior Java Developer with 9 years of experience building enterprise Java microservices at scale across wholesale banking, payments, and regulated SaaS, specializing in Spring Boot microservices, JPA tuning, and event-driven Kafka architectures.
- Hands-on coverage across Java LTS (Java 21), Spring ecosystem (Spring Boot 3), persistence (JPA with Hibernate, PostgreSQL), messaging (Kafka), and containers (Kubernetes, AWS) with strong fundamentals in strong OOP, generics, and concurrency fundamentals with a working command of virtual threads and reactive Reactor.
- Deep expertise in domain-driven microservice architecture, event-driven Kafka design, JPA modelling and query tuning, and cloud-native Kubernetes delivery, applying methodologies such as hexagonal architecture with strict bounded contexts and JVM tuning, GC profiling, and virtual-thread adoption under Project Loom to deliver reliable, high-throughput Java services fit for regulated enterprise scale.
- Engaged collaborator working cross-functionally with Product, Risk, SRE, and Platform teams in SAFe and Scrum delivery environments, contributing to architecture forums, sprint planning, and design reviews with an ownership-first mindset and clean handoffs.
- Mentor who shares technical excellence and fosters a culture of service reliability and secure-coding discipline through PR reviews and pattern docs, while running Java guild and architecture review sessions and authoring widely used service and persistence templates.

TECHNICAL SKILLS

Languages & JVM:	Java 21, Java 17, Java 11, Kotlin, Groovy (basic), records, sealed classes, pattern matching, virtual threads, streams, lambdas
Spring Ecosystem:	Spring Boot 3, Spring Framework, Spring Data, Spring Security, Spring Cloud, Spring Cloud Stream, Spring WebFlux, Actuator
APIs & Microservices:	REST, OpenAPI / Swagger, Jackson, Bean Validation, gRPC, GraphQL, Feign, Resilience4j, service discovery
Persistence & Data:	JPA, Hibernate, Spring Data JPA, MyBatis, JDBC, PostgreSQL, MySQL, Oracle, Flyway, Liquibase, query tuning
Messaging & Events:	Kafka, RabbitMQ, ActiveMQ, JMS, Spring Cloud Stream, Avro, Schema Registry, Kafka Streams
Build, Test & Quality:	Maven, Gradle, JUnit 5, Mockito, AssertJ, Testcontainers, WireMock, REST Assured, SonarQube, JaCoCo
Cloud, Containers & CI/CD:	Docker, Kubernetes, Helm, AWS (EKS, RDS, MSK), GitHub Actions, Jenkins, ArgoCD, GraalVM native images
Security & Observability:	Spring Security, OAuth2, OIDC, JWT, OWASP Top 10, Vault, Micrometer, Prometheus, Grafana, OpenTelemetry, ELK

EDUCATION

TU Darmstadt M.Sc. in Computer Science

Darmstadt, Germany • Sep 2013 - Jun 2017

WORK EXPERIENCE

Deutsche Bank Senior Java Developer

Frankfurt, Germany • May 2020 - Present

- Owned core Java service development and end-to-end delivery on the **wholesale-banking post-trade settlement platform** handling **3.2M trades / day**, shipping **trade capture**, **settlement workflows**, and **regulatory reporting** across **18** modular Spring Boot microservices on modern Java LTS.
- Built service skeletons on **Spring Boot 3** with Spring Framework, Spring Data, Spring Cloud, and Actuator, leaning on **auto-configuration** and **bean DI** plus AOP for cross-cutting concerns across **18** Spring Boot services, cutting boilerplate per service by **42%**.
- Designed REST microservice contracts with **versioned REST with OpenAPI contracts**, Jackson serializers, Bean Validation, and Resilience4j for circuit breakers and retries across **120+** endpoints, pulling p95 latency from **640ms** down to **180ms** on the hot settlement path.
- Tuned persistence and data access through **JPA with Hibernate**, Spring Data repositories, Flyway migrations, and **Hibernate criteria with second-level cache** against a PostgreSQL cluster with **240+** tables, dropping slow-query incidents per release by **68%**.
- Drove concurrency and JVM tuning with **virtual threads under Project Loom**, java.util.concurrent primitives, async profiler, and G1 GC tuning, lifting settlement throughput from **14k/min** to **46k/min** while trimming heap footprint per pod by **34%**.
- Owned messaging and event-driven workflows on **Kafka** with Spring Cloud Stream, schema-registry Avro contracts, and **Kafka event sourcing with idempotent consumers** across **22** production topics, sustaining peak load of **180k msg/s** with zero duplicate-settlement incidents over the last four quarters.
- Shipped cloud-native deployments with **GraalVM native images on Kubernetes**, Helm charts, ArgoCD GitOps, and 12-factor configuration on **Kubernetes** running **18** services with **daily** production releases, cutting cold-start time on critical services by **72%**.

SAP Java Developer

Walldorf, Germany • Jul 2017 - Apr 2020

- Owned build tooling and project management with **Maven multi-module** reactor builds, Nexus artifact hosting, dependency-convergence enforcement, and Jenkins pipelines across **14** modules in a shared enterprise SaaS monorepo, cutting full-build wall-time by **55%** through cache reuse and parallel module execution.
- Drove testing and quality with **JUnit 5 with Testcontainers**, Mockito, AssertJ, WireMock, and REST Assured for integration coverage, plus Spring Boot Test slices for fast feedback, lifting line coverage from **48%** to **86%** and cutting regression-escape incidents per release by **58%**.
- Hardened authentication and secure coding with **Spring Security with OAuth2 and OIDC**, JWT bearer tokens, secret rotation via Vault, and OWASP Top 10 review gates across **80+** secured endpoints, dropping audit-cycle OWASP findings on the SaaS tenant module by **74%**.
- Strengthened core Java foundations across the team through **records**, **sealed types**, and **stream pipelines**, generics-heavy API design, and immutability-first refactors, while mentoring **4** junior Java developers through pair-programming, code-review checklists, and a written modern-Java idiom guide adopted across two squads.
