

PROFILE SUMMARY

- Senior Angular Developer with 8 years of experience building enterprise Angular applications at scale across enterprise cloud consoles, hybrid-cloud admin portals, and regulated SaaS, specializing in standalone components, Signals, and reactive RxJS architectures.
- Hands-on coverage across Angular versions (Angular 17, Angular Universal), state management (NgRx, RxJS), UI and styling (Angular Material, Tailwind CSS), testing (Jest, Cypress), and languages (TypeScript, JavaScript) with strong fundamentals in dependency injection discipline, reactive composition, and OnPush change-detection rigor.
- Deep expertise in standalone-component architecture, signal-driven state design, reactive RxJS composition, and type-safe enterprise UI delivery, leveraging methodologies such as lazy-loaded feature modules with route-level code splitting and OnPush change detection and Angular Universal SSR to drive fast, accessible, type-safe Angular applications fit for enterprise scale.
- Engaged collaborator working cross-functionally with Product, Design, Backend, and Platform teams in SAFe and Scrum delivery environments, contributing to architecture forums, sprint planning, and design reviews with an ownership-first mindset and clean handoffs.
- Emerging leader who shares technical excellence and fosters a culture of component reusability and accessibility discipline through PR reviews and pattern docs, while leading Angular guild and architecture review sessions and authoring widely used component and service templates.

TECHNICAL SKILLS

Angular & Frameworks:	Angular 17, Angular 16, standalone components, Signals, control flow syntax, Angular Universal, Nx workspaces
State Management:	NgRx (Store, Effects, Entity), NGXS, Akita, Signals, BehaviorSubject patterns, ComponentStore
RxJS & Reactive:	RxJS Observables, Subjects, operators (switchMap, debounceTime, combineLatest), marble testing, scheduling
UI & Styling:	Angular Material, PrimeNG, Nebular, Tailwind CSS, SCSS, CDK overlays, design tokens
TypeScript & Tooling:	TypeScript (strict), ESLint, Prettier, Angular CLI, esbuild, Vite, Nx, pnpm, Husky
Testing:	Jest, Jasmine, Karma, TestBed, Spectator, Cypress, Playwright, MSW, Storybook
Performance & Build:	OnPush change detection, lazy loading, esbuild, source-map-explorer, LCP/INP, hydration, tree shaking
Accessibility & Forms:	Reactive Forms, template-driven forms, custom validators, WCAG 2.2, ARIA patterns, CDK a11y

EDUCATION

University of Texas at Austin B.S. in Computer Science

Austin, TX • Sep 2014 - May 2018

WORK EXPERIENCE

IBM Cloud Senior Angular Developer

Austin, TX • Apr 2022 - Present

- Drove Angular application development and end-to-end feature delivery across IBM Cloud admin and provisioning consoles supporting 9 product squads, shipping provisioning flows, billing dashboards, and resource-management consoles across

40+ lazy-loaded feature modules.

- Designed component architecture with **standalone components**, smart-versus-presentational separation, and content projection for shared CDK overlays, shipping **180+** reusable building blocks adopted by **9** squads through a shared design-system library.
- Architected client state with **NgRx** Store, Effects, and Entity adapters for cross-feature global state, ComponentStore for feature-local flows, and Signals for derived view state across **14** feature stores, retiring **5+** classes of stale-state and double-dispatch bugs.
- Owned reactive programming with **RxJS** across data streams and user interactions, building **switchMap-driven request pipelines** with combineLatest, debounceTime, and takeUntilDestroyed across **60+** streams, dropping subscription-leak incidents per quarter by **78%**.
- Owned TypeScript adoption and strong typing through **generic service typing** with discriminated unions, decorator-driven DI, and strict-mode **TypeScript** with no implicit any, lifting strict coverage from **58%** to **96%** and cutting runtime error incidents by **64%**.
- Drove performance and build tooling with **OnPush change detection**, esbuild-powered Angular CLI builds, Angular Universal hydration, and route-level lazy loading, pulling initial bundle from **2.4MB** to **980KB** and LCP from **3.4s** to **1.4s** on the console home.
- Built API integration with **HttpClient** with **typed interceptors** for retry, error mapping, and request caching, plus **OIDC** and **JWT refresh** and GraphQL queries via Apollo across **95+** REST and GraphQL endpoints, dropping failed-call rates by **46%**.

Indeed [Angular Developer](#)

Austin, TX • Aug 2018 - Mar 2022

- Built routing and module architecture with **lazy-loaded feature modules**, route guards for authenticated and role-gated areas, resolvers for prefetch, and preloading strategies across **70+** lazy routes, cutting initial bundle load on the employer dashboard by **52%**.
- Owned forms and user input with **Reactive Forms**, custom validators, dynamic form generation from schema, and async validation against the careers API across **22** form surfaces, lowering validation-error rates on job-post submission by **38%**.
- Owned Angular testing and the QA program with **Jasmine** and **Karma** for unit tests, TestBed for component tests, and Cypress for end-to-end coverage on employer-onboarding flows, lifting unit coverage from **44%** to **84%**, cutting regression escapes per release by **62%**, and onboarding **3** junior Angular developers along the way.
