

PROFILE SUMMARY

- Full-Stack Developer with 6 years of experience designing and shipping end-to-end web applications across productivity SaaS, project management, and developer tools, specializing in end-to-end feature ownership, full-stack TypeScript, and design-system implementation.
- Solid technical background across front-end (React, Next.js, Tailwind CSS), back-end (Node.js, Express), languages (TypeScript, Python), databases (PostgreSQL, Redis, MongoDB), and cloud (AWS, Vercel) with strong fundamentals in REST APIs, Git workflows, and Linux fundamentals.
- Deep expertise in end-to-end feature ownership, design-system thinking, API contract design, and production hardening, leveraging methodologies such as trunk-based development and component-driven UI to drive maintainable, accessible, and performant web applications.
- Engaged collaborator working cross-functionally with Design, Product, and Engineering teams in Agile environments, contributing to feature scoping, design reviews, and post-launch retrospectives with a pragmatic, ownership-first mindset.
- Emerging leader who shares technical excellence and fosters a culture of craft-level UI quality and API-first thinking through PR reviews and runbooks, while leading full-stack guild sessions and authoring widely adopted component templates.

TECHNICAL SKILLS

Front-End:	React, Next.js, Tailwind CSS, shadcn/ui, React Query, Zustand
Back-End:	Node.js, Express, NestJS, Prisma, GraphQL, REST
Languages:	TypeScript, JavaScript, Python, SQL, Bash
Databases:	PostgreSQL, Redis, MongoDB, MySQL
Testing:	Vitest, Jest, Playwright, Cypress, Pact
Cloud & Hosting:	AWS (ECS, RDS, S3, Lambda), Vercel, Netlify, Cloudflare
DevOps & CI/CD:	Docker, GitHub Actions, Terraform, Datadog, Sentry
Design & Collaboration:	Figma, Storybook, design tokens, WCAG 2.1 AA

EDUCATION

University of Texas at Austin

B.S. in Computer Science

Austin, TX • Sep 2015 - May 2019

WORK EXPERIENCE

- Notion
- Senior Full-Stack Engineer
- Remote (Austin, TX) • Aug 2022 - Present
- Own end-to-end feature delivery for the Notion AI workspace assistant serving 18M+ MAU, leading work across UI, API, and data for 12 shipped features.
 - Built the AI search and inline-action surface in React and Next.js with Tailwind CSS, applying React Server Components, streaming SSR, and optimistic UI updates, lifting Lighthouse from 74 to 96 and cutting TTI by 41%.
 - Designed a GraphQL API in Node.js for workspace AI queries, defining schema versioning, dataloader-based N+1 prevention, and persisted-query caching, handling 2.4M/day at 85ms p95.
 - Modeled the collaborative document schema on PostgreSQL JSONB with Redis hot-read caching and MongoDB change-history events, supporting 400M+ blocks at 28ms p99 read latency.
 - Integrated Stripe billing, Clerk auth, PostHog analytics, and Resend transactional email into a unified workflow, cutting

onboarding friction from **8 steps** to **2 clicks** and lifting paid-tier conversion by **18%**.

- Optimized full-stack performance through **bundle splitting**, edge caching on Vercel, PgBouncer connection pooling, and Server Component streaming, cutting median page load from **3.4s** to **0.9s** and API p95 from **240ms** to **92ms**.
- Built a multi-layer testing strategy spanning **Vitest** (unit), **Playwright** (end-to-end), and **Pact** (contract), raising overall coverage from **52%** to **89%** and catching **34+** regressions during pre-release cycles.

Linear **Full-Stack Engineer**

San Francisco, CA • Jul 2019 - Jul 2022

- Implemented **OAuth 2.1 + PKCE** authentication using **Auth0** for the **Linear public API**, building **scoped JWT tokens** with refresh-token rotation and OWASP Top 10 hardening, securing **5,000+** active integrations without a customer-reported breach.
- Partnered with the Design team on a shared component library in **React + Storybook**, translating Figma mockups into **40+** reusable accessible components to **WCAG 2.1 AA**, cutting UI bug volume by **62%**.
- Owned CI/CD pipelines for **6** services on **GitHub Actions** and AWS ECS, building **Docker-based deploys** with preview environments per PR and automated rollback on health-check failure, reducing deploy lead time from **3 hours** to **18 minutes**.
- Worked closely with **Product, Design, and Engineering** teams across **5** product surfaces to negotiate **API contracts**, feature scope, and release strategy, authoring **8** full-stack RFCs that shaped the org's ownership model and onboarding **11** new engineers.
