

PROFILE SUMMARY

- Senior Mobile Engineer with 7 years of experience shipping consumer mobile apps across social camera, on-demand transportation, and consumer SaaS, specializing in iOS-first SwiftUI development, MVVM + Clean Architecture, and camera / AR feature delivery.
- Solid technical background across native platforms (Swift / SwiftUI, Kotlin / Jetpack Compose), cross-platform (React Native, Flutter), architecture (MVVM, Clean Architecture), API & networking (URLSession + Combine), testing (XCTest), and languages (Swift, Kotlin) with strong fundamentals in Apple Human Interface Guidelines, Material Design, and platform-aware UX craft.
- Deep expertise in platform-native UX craft, reactive state management, offline-first data sync, and performance and battery profiling, leveraging methodologies such as MVVM + Clean Architecture and modular feature delivery to drive responsive, reliable, and store-policy-clean apps.
- Engaged collaborator working cross-functionally with Design, Backend, Product, and QA teams in consumer-app delivery environments, contributing to design reviews, API-contract negotiations, and release-readiness gates with a user-first, ownership-first mindset.
- Emerging leader who shares technical excellence and fosters a culture of crash-free obsession and pixel-perfect discipline through code reviews and mobile office hours, while leading Mobile guild and code-review clinics and authoring widely adopted SwiftUI-component and architecture-pattern templates.

TECHNICAL SKILLS

iOS:	Swift, SwiftUI, UIKit, Combine, Swift Concurrency (async/await), Xcode, Instruments, App Store Connect
Android:	Kotlin, Jetpack Compose, Coroutines + Flow, Hilt, Android Studio, Android Profiler, Play Console
Cross-Platform:	React Native, Flutter, Kotlin Multiplatform Mobile (familiarity), bridging native modules
Architecture & State:	MVVM, MVI, Clean Architecture, Coordinator pattern, The Composable Architecture (TCA), Redux, dependency injection
Networking & Storage:	URLSession, Combine, Alamofire, Retrofit + OkHttp, Apollo GraphQL, Core Data, Room, Realm, SQLite
Device Capabilities:	AVFoundation (camera), CoreLocation (GPS), APNs / FCM push, biometrics (Face ID, Touch ID), Bluetooth, Sensors, deep links, background tasks
Testing & Release:	XCTest, Espresso, Detox, Maestro, snapshot testing, Firebase Test Lab, BrowserStack, TestFlight, Play Console internal tracks
Monitoring & Analytics:	Crashlytics, Sentry, Bugsnag, Firebase Analytics, Amplitude, Mixpanel, feature flags (LaunchDarkly, Firebase Remote Config)

EDUCATION

University of Southern California (USC) Viterbi **B.S. in Computer Science** Los Angeles, CA • Sep 2014 - May 2018

WORK EXPERIENCE

Snap Inc. Senior Mobile Engineer

Santa Monica, CA • Aug 2022 - Present

- Own Camera and Lens Studio mobile experiences on the flagship Snapchat iOS app reaching 390M DAU, leading end-to-end delivery across camera capture, creator tooling, and AR Lens preview, shipping 14 production features over the period.

- Drove the SwiftUI design-system rollout in **Swift / SwiftUI**, delivering **pixel-aligned SwiftUI** components against Figma specs with Dynamic Type, Dark Mode, and reduce-motion support, shipping **38** reusable components and landing VoiceOver coverage on **100%** of new feature screens.
- Built creator-API integration on **URLSession + Combine** with **REST + GraphQL clients**, OAuth 2.0 token refresh, and exponential-backoff retries with offline queueing, handling **220M** daily API calls and cutting network-error rate from **4.6%** to **0.9%**.
- Led the Clean Architecture migration using **MVVM** and **Clean Architecture**, applying **MVVM use-case layers** with dependency injection via Resolver and single-source-of-truth Combine pipelines across **9** feature modules, cutting story-to-merge time from **9 days** to **3 days** for the Camera squad.
- Ran the iOS app-performance program with **Instruments profiling**, image-decoding off the main thread, and lazy module loading on cold start, cutting cold-start time from **2.4 s** to **0.9 s** and lifting sustained frame rate from **48 fps** to **60 fps**.
- Shipped native-feature integrations including **AVFoundation camera** with custom Metal effects, APNs push with rich payloads and silent updates, and Face ID auth with universal-link deep linking across **5** surfaces, lifting push-driven daily-return rate from **22%** to **38%** across the first 6 months.
- Owned the App Store release pipeline via **TestFlight** and **Fastlane build and sign**, with phased rollout, crash-rate gates, and a weekly app-review playbook against App Store Review guidelines, shipping **42** production releases with **zero** rejected submissions over the last 18 months.

Uber **Mobile Engineer**

San Francisco, CA • Jun 2019 - Jul 2022

- Built the offline-first rider experience on **Core Data** with **background-context syncs**, last-known-trip recovery on relaunch, and optimistic UI with conflict-aware merges, cutting failed-to-recover sessions from **3.8%** to **0.6%** across spotty-network markets.
- Drove the automated mobile-testing program using **XCTest** with **unit and integration suites**, snapshot tests on key flows, and Firebase Test Lab device-matrix runs, lifting unit-test coverage on the Rider app from **42%** to **78%**.
- Built the mobile-observability program on **Crashlytics** and **Firebase Analytics**, adding **Crashlytics symbolication** and triage workflows, Amplitude funnel dashboards, and feature flags via LaunchDarkly for safe rollouts, lifting crash-free sessions from **99.4%** to **99.92%**.
- Worked closely with **Design, Backend, Product, and QA** teams to coordinate **weekly mobile-arch reviews**, release-readiness gates, and backend API-contract reviews, authoring **11** mobile-architecture RFCs that shaped the team's standard playbook and mentoring **4** junior engineers through their first cross-platform feature launches.
