
PROFILE SUMMARY

- **Software Architect with 14 years of experience** shaping large-scale SaaS platforms across creative SaaS, real-time collaboration, and event streaming, specializing in distributed systems design, evolutionary architecture, and platform-grade NFRs.
- Solid technical background across architectural patterns (microservices, event-driven), languages (Java, Go), cloud (AWS), data and messaging (PostgreSQL, Kafka), API styles (REST, gRPC), and diagrams (C4 model) with strong fundamentals in domain-driven design, ADR discipline, and trade-off thinking on every decision.
- Deep expertise in distributed system design, non-functional requirements engineering, evolutionary architecture, and security-by-design thinking, leveraging methodologies such as ADR-driven decision making and threat-modeling reviews to drive resilient, secure, and evolvable platforms.
- Engaged collaborator working cross-functionally with Engineering, Product, and Security leadership in design-review-driven engineering organizations, contributing to architecture review boards, executive trade-off forums, and post-incident retrospectives with a pragmatic, ownership-first mindset.
- Senior leader who shares technical excellence and fosters a culture of trade-off discipline and written-decision rigor through ADR reviews and design coaching, while leading architecture guild sessions and authoring widely adopted ADR and reference-design templates.

TECHNICAL SKILLS

Languages:	Java, Go, TypeScript, Python, Kotlin, SQL
Architectural Patterns:	Microservices, event-driven, CQRS/event sourcing, hexagonal, serverless, modular monolith, DDD
Cloud & Platform:	AWS (EKS, Lambda, SQS, S3, Aurora), GCP, Azure, Kubernetes, Terraform, service mesh (Istio)
Data & Messaging:	PostgreSQL, MongoDB, DynamoDB, Cassandra, Redis, Kafka, RabbitMQ, Elasticsearch
APIs & Contracts:	REST, gRPC, GraphQL, OpenAPI, AsyncAPI, Protobuf, JSON Schema, gateway (Kong, Apigee)
Security & Compliance:	Threat modeling, OAuth2, OIDC, mTLS, zero trust, SOC 2, GDPR, HIPAA, PCI DSS
Documentation & Diagrams:	C4 model, ADRs, sequence diagrams, PlantUML, Structurizr, Mermaid, Confluence, RFC process
Methodology & Practices:	Domain-driven design, event storming, fitness functions, architecture katas, design reviews, mentorship

EDUCATION

University of Wisconsin-Madison **M.S. in Computer Science**

Madison, WI • Sep 2010 - May 2012

WORK EXPERIENCE

Adobe **Principal Software Architect**

San Jose, CA • Sep 2020 - Present

- Own architectural vision and strategy for the Creative Cloud platform services serving **60M+ paid subscribers**, shaping real-time collaboration, asset and rendering pipelines, and identity and entitlements with influence across **400+** engineers and **30** teams.
- Set platform-wide system design around event-driven microservices on Kafka with CQRS on read-heavy collaboration paths and hexagonal boundaries around legacy cores, anchoring **80+** production services at **220k req/s peak**.
- Drove technology selection through weighted POC scorecards on cost, ops, and team skill, with ADR-tracked decisions and

revisit triggers, leading **11** cross-team POCs and standardizing **7** platform components org-wide.

- Codified non-functional requirements across the platform through **explicit SLO contracts**, capacity headroom and back-pressure design, and multi-region active-active on tier-1 services, cutting tier-1 p99 latency from **640 ms** to **180 ms** and lifting availability to **99.99%**.
- Designed cross-system integration around **AsyncAPI data contracts**, federated identity, and API gateway boundaries with a deprecation policy, knitting together **14** product lines and **6** external partners at **3.2B events/day**.
- Embedded security-by-design via **threat modeling** on every greenfield design, **OAuth2 + OIDC + mTLS** service identity, and encryption-at-rest with key-rotation by default, retiring **240+** pre-prod findings and holding **SOC 2 Type II** and GDPR alignment.
- Led stakeholder communication using **C4 diagrams** calibrated by audience layer, **trade-off memos** for executive review, and design-review facilitation across product lines, reaching **VP and C-level** forums and aligning **6** directors on a multi-year platform roadmap.

Confluent **Senior Software Architect**

Mountain View, CA • Jul 2016 - Aug 2020

- Built the architecture documentation system on **Markdown ADRs** in-repo, C4 diagrams via Structurizr DSL, and sequence diagrams in PlantUML, capturing **120+** ADRs adopted as the **org-wide design baseline**.
- Ran the technical leadership program through a **weekly architecture guild**, 1:1 mentorship for senior-to-staff candidates, and design-doc coaching with structured feedback, mentoring **18** senior engineers and supporting **9** promotions to **staff or principal**.
- Drove evolutionary architecture via **strangler-frog migrations** off the legacy monolith, fitness functions wired into CI, and quarterly tech-debt budgets agreed with PMs, taking the tech-debt ratio from **34%** to **11%** across **22** incremental cutovers with zero rollbacks.
- Partnered cross-functionally with **Product, Security, and Platform Engineering** teams across **4 streaming product lines** on roadmap trade-offs, compliance gates, and senior+ hiring rubrics, authoring **14** platform RFCs that shaped the org's architecture standard and onboarding **7** senior engineers and architects.
