Experience

Data Engineer, Ippon Technologies – New York, NY

September 2021 – June 2023

- Built PySpark library modules to connect AWS Glue ETL with various data sources (Snowflake, Elasticsearch, REST APIs, SFTP Server) lacking native integrations, enhancing developer experience.
- Authored Spark best practices documentation for scalable, high-performance ETL pipelines, emphasizing optimization techniques for reducing shuffles and spills and leveraging Glue's scaling features.
- Onboarded 3 teams to AWS Glue migrating from low code ETL tool. Instructed teams on how to use GitHub Actions to trigger Terraform builds to automatically deploy their ETL jobs.
- Developed Terraform module for custom Glue Studio Transform to users to paginate REST API calls without having to write code, something that previously could not be done in Glue Studio.

Data Scientist, Zayo Group – Boulder, CO

June – Sept 2021

- Developed T-SQL procedures to generate service history snapshots for training a churn prediction model, optimizing query performance from 25 to 5 minutes using indexes across 10 tables.
- Created data cleaning, pre-processing, model training and evaluation pipeline using Python Pandas, Scikit-learn, and XG-Boost for the above ML-model.
- Wrote Python script to scrape Google search results using Selenium and BeautifulSoup to determine top ranking key-words for search terms to improve SEO ranking and got ranked on the first page of results.

Data Analyst, Zayo Group – Boulder, CO

June – Sept 2021

- Created complex data sets for dashboards and reporting using Salesforce CRM Analytics Dataflows to join, transform, and aggregate multiple data sources together for scheduled refreshing.
- Automated manual revenue reporting task processing Excel spreadsheets using R. Saved a day's worth of work for my manager each week.
- Wrote T-SQL queries calculating summary statistics fields for the customer accounts tables.

Projects

ChordCraft

www.chordcraft.app

- Engineered Next.js+Vercel web app for writing chord progressions without playing an instrument. Built front end with React+Tailwind.css, authenticated users using Supabase. Built API on AWS (Lambda + Gateway) to allow authenticated users to download midi files of their song.
- Integrated Google Analytics to track user behavior. Grew to 3.9k users and 200 monthly users.

Skills

Technologies + concepts: Data Engineering, ETL, Apache Spark, AWS (S3, Glue, Lambda, Step Functions)

Languages: Python, SQL (Snowflake, Microsoft SQL Server, Postgres), Typescript, Terraform

Education + Certifications

University of Colorado, Boulder – BA in Mathematics, Minor in Computer Science

May 2019

Snowflake SnowPro Core

June 2022

AWS Certified Cloud Practitioner

September 2022
